

TPPetrol

The service station module
for retail businesses

- TPPetrol is the software package for retailers who want to expand their services to include service stations and need a consistent solution platform. This module allows reuse of central control and local accounting functions, provides uniform user interfaces as well as consistent integration mechanisms and data management – from the PoS system, to the customer restaurant through to the filling pump.

When retailers want you to stop and refuel

Already best practice in some segments, this service add-on has reached the planning stage in other areas: Operation of own service stations is becoming increasingly important in the retail sector. However, a number of process-specific requirements need to be fulfilled in this regard. IT investments and support expenditure must be kept to a minimum, while process transparency and data consistency have to be maximized. This means that a consistent and uniform solution is required that supports all checkout processes, from the PoS workstation to new point-of-service concepts through to checkout at the filling pump.

Flexibility is a must

TPPetro from Wincor Nixdorf takes account of the specific requirements of service stations. Components such as filling pump controllers are integrated with ease and the functional enhancement of the checkout is performed accordingly. This means that uniform software and a common database with customized user interfaces are available at all points of sale.

A perfect foundation for tomorrow as well as today

TP.net provides a software platform with its own unique success story: Since the product was launched four years ago, some 60,000 PoS licenses have been sold in more than 25 countries and are up and running in a wide range of different market segments – from food retailing to DIY stores, the textile trade, specialty retailing, department stores, cash & carry, pharmacies and cosmetics retailing. That makes it a proven platform for integrating a service station solution in the shape of TPPetro.

Wherever you are: our Competence Centers

With Wincor Nixdorf, you benefit from our now more than 25 local service centers throughout the world. Experienced TP.net specialists are on hand to assimilate and implement country and/or customer-specific requirements. In this way there is no dependency on central development.
