Lottery Terminal

■ The next generation

Challenges are opportunities

*– Opportunities in the lottery market*

→

We tackle the challenge of developing custom solutions for our customers' complex and individual needs.

The lottery market is as open as it is fast-moving. That's why strategic flexibility for lottery companies is one of the critical requirements for being able to respond quickly and purposefully to new market demands.

You need a technology partner with the development potential and resources to create and deploy future-oriented technologies.

Wincor Nixdorf's business unit Lottery Solutions has been supplying the lottery market with path-breaking new developments for more than 3 decades and is able to leverage all the know-how and worldwide support of the Wincor Nixdorf group.

The result is lottery terminals with a superior design and an availability that is ensured even under the toughest of conditions.

Flexible integration of individual components keeps every option open.

Like all lottery terminals from Wincor Nixdorf, Xion /M*top* is part of our IPC (Intelligent Platform Concept) product strategy that is based on common hardware and software platforms.

For the hardware platform and its flexible extension, we provide our customers with high-quality standard components that have already proven their reliability more than 1,000,000 times over in retailing and banking.

The software platform we use is the unique terminal system software X*icore*, which can be tailored to suit any customer's specific needs.

The option of integrating state-of-the-art technology such as DVD, multimedia, and 2D barcode readers, and the availability of Wincor Nixdorf's extensive product and peripherals portfolio, round off our overall concept.

The basis of each of our powerful systems is an intelligent concept that is both simple and flexible.

Rapid and secure processing of all types of playslips is a must for ensuring smooth lottery operations.

Xion /M*top* has the robustness and high-quality design that are the hallmark of the other terminals from the Xion series. New features are the even more powerful system unit, the high-speed thermal printer X*iprint+*, and the option of integrating many useful modules. The following modules are available:

- A 1D or 2D barcode reader
- Smart card or hybrid card reader
- Various drives (HDD, DVD, flash disk)
- and a branding module that marks and invalidates canceled tickets, for example.

Unique features, unique performance
– Flexibility creates options

Everything about Xion /M*top* has been developed to ensure constant strategic flexibility for lotteries.

There are various levels of processing power available to address our customers' differentiated performance requirements.
The open PC architecture also permits custom configuration and modular extension of the entire system.

The multimedia features of the terminal, together with the centralized content management system Xi*media*, have the potential to transform a lottery outlet into a modern, efficient sales outlet. As a result, advertising messages to promote sales can be shown on customer screens and marketing displays.

Xi*print*+, the new high-speed thermal printer with graphics capability, can reproduce logos and images in unprecedented quality – even with a splash of color if desired.

The speed at which tickets are printed sets standards in the lottery world and slashes game processing time.

Numerous sensors and security features ensure smooth and secure printing. Xi*print*+ not only looks good, it represents the state of the art and is the most future-proof lottery printer on the market today.

Small, quick and easy to use. Xi*print*+ – the lottery printer for the highest of requirements.

Whether you choose a 12.1" or 15" touch-screen, digital image transmission guarantees the best possible picture.

Xion /M*top* creates advantages

– *Advantages create success*

Xion /M*top*, the latest-generation lottery terminal: flexible, innovative and extremely versatile

Xion /M*top* optimizes sales
- ■ with modules to match an individual range of applications
- ■ with a design that makes operation and maintenance extremely simple
- ■ with a special branding module for more security
- ■ with the rapid Xi*print*+ printer to speed up game processing time

Xion /M*top* minimizes costs
- ■ with mature concepts and a high level of quality for the very best TCO (Total Cost of Ownership)
- ■ with its robust construction, consisting of tried-and-tested standard components for outstanding MTBF values
- ■ with accessible individual components to permit rapid replacement during servicing
- ■ with its open PC architecture and flexible expandability
