Mobile Smart Safe^{iQ}

New opportunities for automated teller safes

Mobile SmartSafe^{iQ} is a new payment infrastructure based on ATS (Automated Teller Safe) and smartphone. Among the main features of Mobile SmartSafe^{iQ} are usability, extended functionality, high security level, lower cost of service point and reduction of workload of the bank branch's lobby staff. Mobile SmartSafe^{iQ} provides end users with a wide range of banking services for conducting cash transactions, such as cash withdrawal, cash acceptance and crediting to a bank account, payment for services, currency exchange.

The new system allows combining functions of the recirculating ATM, payment self-service kiosk and currency exchange machine as well as provides all these services in a convenient interface of a personal smartphone.

Features

Providing the bank clients with the following services:

- cash withdrawal;
- cash deposit;
- payment for goods and services via cash deposit;
- currency exchange with transfer of balance to the bank account;
- cash withdrawal by drawing from any (non-bank) account (Cash Anywhere);
- provision of information from external information and billing systems;
- **opportunity to provide the assistance service to the bank's VIP customers.**

Providing staff with full accounting (basic list of reports is being updated in accordance with the necessary forms):

- safe's cash report;
- report on safe's collections;
- report on operations over the selected period;
- safe's turnover over the period;
- report on cash balance;
- reports on unpicked and deferred banknotes;
- report on trade payables.

Safe network monitoring

- Availability of safes and servers via the messaging network.
- Safes' current balance.
- The equipment's technical condition up to the node.

Example of user interface

Mobile Loyalty^{iQ}

The mobile application for loyalty programs and virtual wallets

About the application

With the help of mobile application Mobile Loyalty^{iQ} buyers can connect to their virtual / electronic profile, receive relevant information about products, services, discounts and promotions from sellers involved in the loyalty system.

Using the system, sellers can segment customers, manage discount programs, provide personalized products and services, and send personalized advertising to the chosen segment of customers.

How the system works

When purchasing a selected product or service, the user of the mobile application identifies himself (via QR code or Bump) in the seller system and receives a personalized discount. Also, the customer can pay for purchases at online stores using an electronic purse system.

Benefits

For merchants:

- additional channel of informing the customers about the products, services and offers;
- additional direct marketing channel;
- direct access to specified customers' segments.

For consumers:

- access to relevant information on products, services and offers;
- personalized discounts;
- authorization in merchant's system by QR-code or Bump.

Example of user interface

System Mobile Loyalty^{iQ} invites customers to participate in loyalty programmes provided by sellers of goods and services, providing new ways to communicate and access information about prospective buyers.

Mobile Dashboard.iQ

Mobile application for analysis, control and management of organization's business processes

About the system

Mobile Dashboard.iQ solution collects the data on organization's performance, according to user's demands and produces the reports, convenient for further analysis and decision making. Analytical data is displayed in real time mode, as inquired and scheduled by the user.

Benefits

- access to all types of analytical data and adjusting the systems running in the organization;
- optimization of organization's assets management;
- creating personalized reports;
- real time monitoring of business processes;
- subscribing for the data, according the user rights;
- limits on the received data, according the user rights.

Example of user interface

Mobile Publisher^{iQ}

The application for reading the periodicals on mobile devices

About the system

Mobile Publisher^{iQ} is a platform for creating the mobile apps, dedicated to administrate and read the periodicals on mobile devices.

Press LT app, created on Mobile Publisher^{iQ} platform, is serving the publishers and the readers. The application empowers the users to upload and manage the content, videos and other information, as well as follow the statistical sales data. Through Press LT users can subscribe any publishing and read it on the smartphone or other mobile device

Benefits

- convenient multilingual user interface;
- supporting all iOS and Android devices (smartphones, tablet PC etc.);
- provided data protection in accordance to TLS/SSL standard;
- user authorization;
- integration with social networks;
- personalized updates on new issues.
