About the Payments^{iQ} solution

Payments^{iQ} is a full-featured software solution for payments processing (utility services, taxes, and fines), any types of electronic services sales (tickets, refill codes, vouchers, etc.), retail banking automation through ATMs and other self-service terminals management.

Payments^{iQ} solution can be easily integrated into the existing fleet of self-service terminals fleet without disrupting day-by-day operations of the banks, trade organizations and other enterprises.

Payments^{iQ} was recognized as the Best Banking Solution 2012/2013 at Regional Partner Summit Europe 2013, organized by Wincor Nixdorf (Diebold Nixdorf).

Payments^{iQ} complies with the requirements of the PCI PA-DSS (Payment Application Data Security Standard).

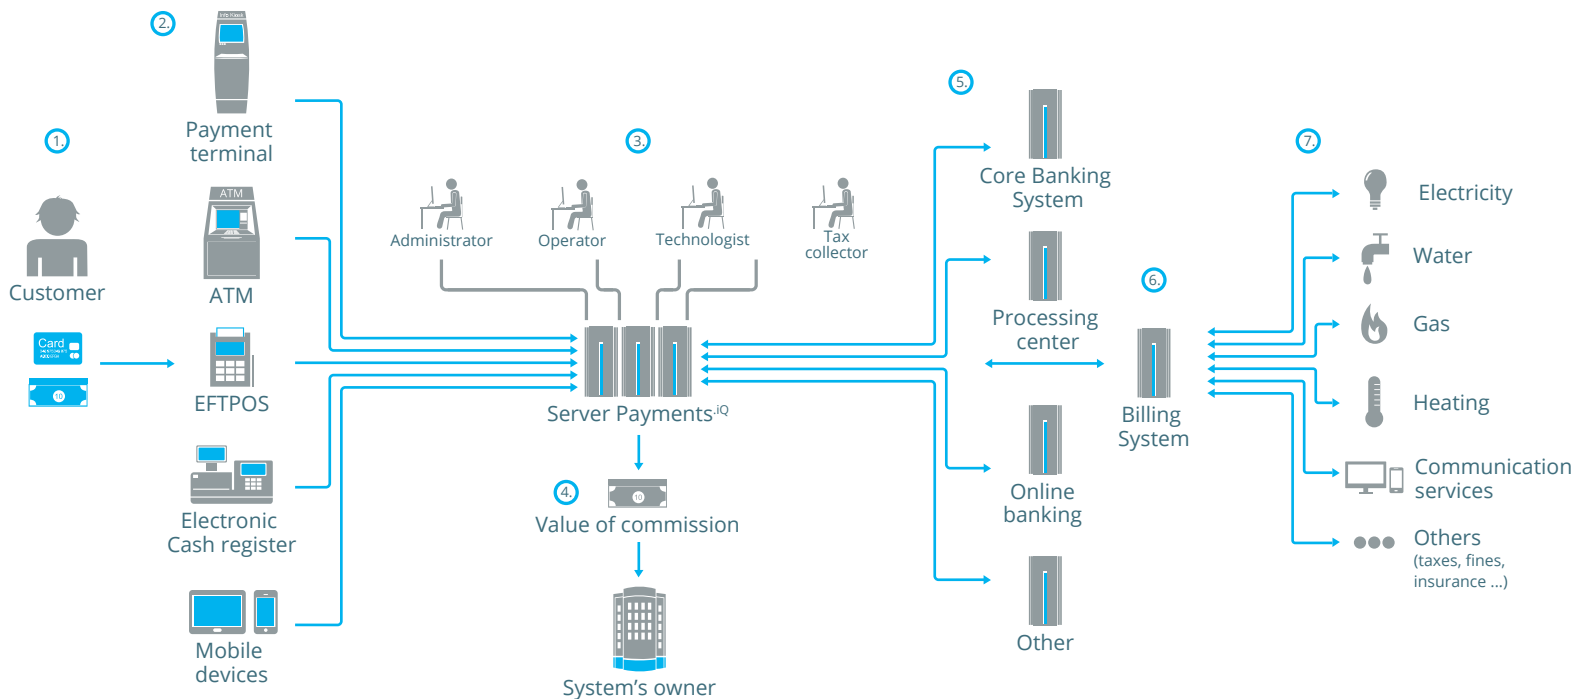

Features

- Provision of the Information and payment services through self-service terminals;
- Registration, routing and processing of the payments information;
- Payments in cash, by payment cards or by transferring of funds from an account;
- Collection and processing of financial transactions from customers' self-service devices;
- Support for cash collection (CIT) procedures;
- Identification of collectors in various ways;
- Flexible commission assignment system for each individual service provider;
- Specific role based users - operators, administrators, technologists, tax inspector etc.;
- Formation of payments registers. One button payment;
- Import and export of reference data from external information systems;
- Capability to generate transaction and analytical reports on the system's functioning and operations;
- Terminal equipment monitoring: cash status, paper roll status in the receipt printer, security sensors status.

Advantages

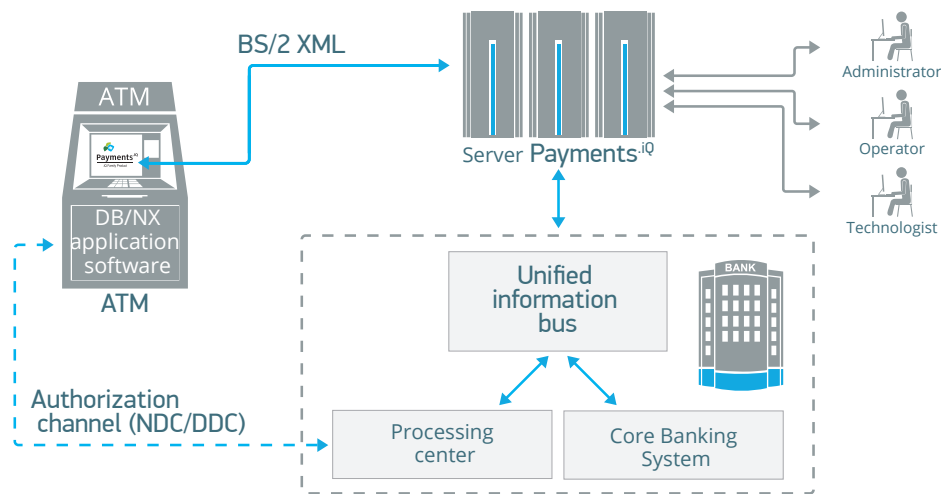

- Different methods of payments - by cash or bank cards;
- Perform bank cards payments using the protocols ISO8583 and NDC/DDC;
- Using of the unified exchange protocol for detailed payment data collection directly from self-service terminals;
- Capability to get customer data from the service provider's database;
- Ability to quickly intergrate with a new payment's providers and add payment scenario;
- Single user-friendly interface for all types of devices independent of its manufacturers;
- Flexible user rights management;
- Various means of integration with third party systems: Web Services, import and export of files;
- Different types of customer's identification: by customer ID in service provider system, payment card number, phone number, loan agreement number, payment book, etc.

Solution scheme

1. POS collect payments for services or products in cash and non-cash form.
2. Multichannel access to payments through diverse type of devices: payment terminals, ATMs, EFT POS terminals, cash registers, mobile devices, etc.
3. Configured role based workplaces for the administrators, operators, technologists, tax inspectors or auditors, creating the whole system's monitoring.
4. Payments register formation, type of commission and its size.
5. Work with third party systems: core banking systems, processing centers, Internet banking, etc.
6. Multi-channel billing system (can be used in the Bill Manager^{iQ} environment).
7. Service Providers.

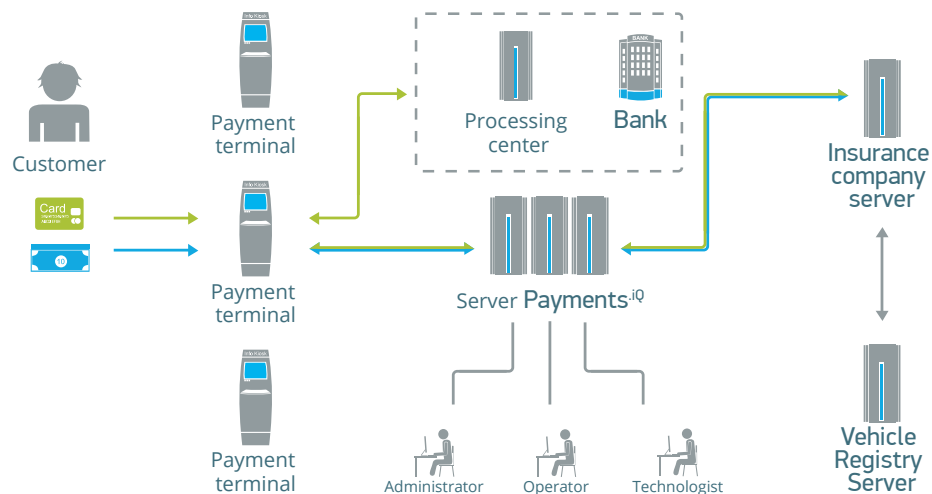

Application of the system Payments.iQ

Bank

The Payments.iQ implementation expands the functionality of self-service devices and enables payments for various services.

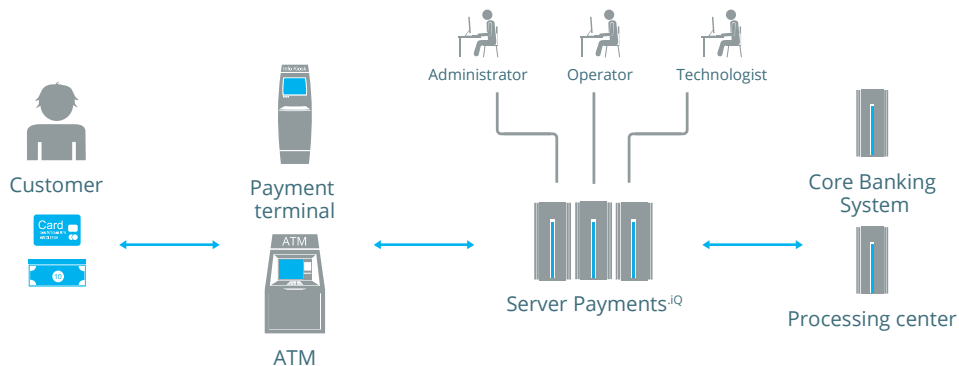

The solution might be integrated with any processing center.

Insurance Company

Payments.iQ implementation scheme for the project « Insurance sales» for the insurance company, using self-service terminals, capable of accepting both type of payment - bank cards or cash with change dispense module».

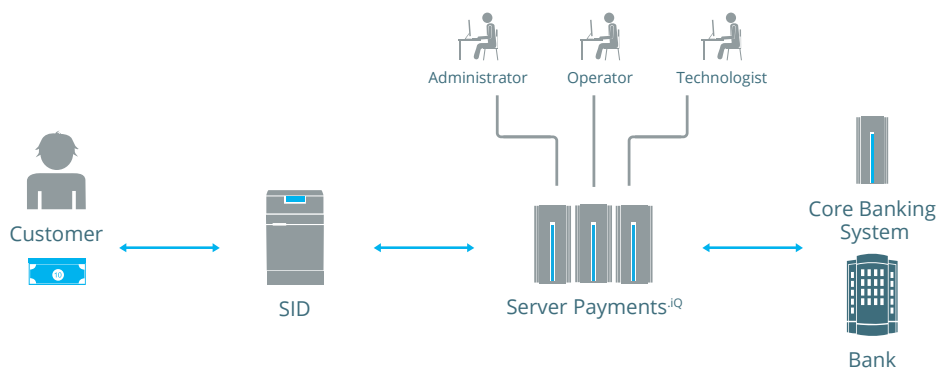

Application of the system Payments.iQ

Repayment of loans

Payments.iQ solution could be applied in the bank and non-bank credit organization in order to provide customers with the opportunity to repay loans on self-service devices.

The solution is integrated with the bank's core or credit organization processing center.

Automatic deposit systems

The Payments.iQ software solution is adapted for the management of various SID (Smart Intelligent Deposit) automatic deposit systems, which allows to expand the functionality of the equipment and use the device for depositing cash in self-service mode.
